

Hiding specific elements, creating viewpoints and creating animation in Navisworks

- Create a new view
 - No avatar showing
 - Hide all the doors, windows, and curtain wall systems in the view.
- Create an animation that shows an avatar walking up the stairs from the first level to the second level (select your animation, and from the animation tab press “export animation”), change the settings as shown in the picture.

- Submit the 02-Your last name.nwf file (no need to upload the referenced files) and the 02_Your last name.avi file (the .nwf file needs to be send to me privately using Telegram, whatsapp, or e-mail: hoda@uw.edu)
